DOOR LOCK CABLES

MGA TWO-SEATER

The method of attaching the door lock cable to the lock lever has recently been improved. All replacements will be to the new pattern (Part Nos. are unchanged),

The modified cable incorporates two end-brackets 'A' in place of the original clinch-straps. One end-bracket is secured to the door lock lever 'B' by a 3/16" diameter rivet 'C'. The opposite end is fixed to the cable door bracket by the existing nut and bolt.

N.B. The rivet 'C' is not serviced and is thus a local supply.
