CLUTCH DRIVEN PLATE ASSEMBLIES

ALL MODELS

The design of certain of these has recently been modified. Eventually all sizes between 7 $\frac{1}{4}$ " (184.15 mm.) and 11" (279.4 mm.) will be dealt with similarly.

No change in part numbers will be made, as the original type 'A' and the later type 'B' (see below) are completely interchangeable.

Until such time as all B.M.C. stocks are to pattern 'B' either type will be supplied.
